

Lands

(Land Status and Ownership, Special Use Authorizations, Access, Adjustments, Property Boundary)

Plan Components

- **Forest Service Overview (all together)**
 - Introduction of Topic
 - Specialist Briefing on Topic
 - Interdisciplinary Team Recommendations
 - Questions

- **Working Group (Each Working Group)**
 - Working groups breakout into their separate groups
 - Working groups discuss each plan component
 - Agree with recommendation
 - Agree with recommendation with modification—identify modification
 - Do not agree with recommendations and develop new plan components

- **Working Group Report Out (all together)**
 - Each working group reports their finding
 - Facilitator summarizes combined finding

Lands

(Land Status and Ownership, Special Use Authorizations, Access, Adjustments, Property Boundary)

Interdisciplinary Team Recommended Plan Components

Desired Condition:

Land ownership is adjusted (acquired or conveyed) as opportunities arise to provide reasonable access or improve efficiency of National Forest System land management.

National Forest System property boundaries adjacent to private lands and boundaries of special areas such as the National Wilderness Preservation System are clearly marked where encroachment is likely to reduce occupancy trespass.

The Forest Service and the public has access to national forest lands, including area xx, xx, and xxx. Access to National Forest lands is legal and new rights-of-ways are acquired where needed to provide additional public and administrative access.

A network of designated communication sites provides appropriate communication for the forest and communities in and near the forest and minimizes the spread of permits and facilities across the landscape. Designated communication sites have approved Communication Site Plans.

Special use authorizations meet forest management and public needs.

Objectives:

1. Acquire one right-of-way to National Forest System lands, annually.
2. Acquire additional access to National Forest System lands in the following areas: XX, XX.
3. Complete one Communication Site Plan every three years.

Standards:

1. None

Guidelines:

1. Communication facilities are located in designated communication sites shown on the Communication Site Map in Appendix XX of the forest plan. Exceptions may be made for non-ground disturbing temporary facilities that are in place for less than one year.

Suitability of Uses**Examples of Lands plan components in other plans.**

Desired Condition: Kootenai Draft Forest Plan, pg 41

Beaverhead –Deerlodge Forest Plan, pg 23 and 24
